An API Key can be considered as a username. This is generated by the exchange once you declare your settings. An API Secret or API Private Key is simply another string of characters that must be used in combination with the API Key to establish the connection. An additional security layer can be added by generating an API Passphrase. While the API Key and Secret are generated by the exchange, the Passphrase is commonly generated by the user.

A YubiKey is a small electronic device that works as a security key and can be used for various authentication methods. On Binance, security keys can provide an extra layer of account security, acting as a Two-factor Authentication (2FA) method for logging in to your account, withdrawing funds, and resetting passwords. While there are other types of security keys, this guide focuses on the YubiKey.
