Controlling shares of the token have been burned meaning that no one can retrieve the initial liquidity provided to PancakeSwap to enable trading, and no one can make any alterations to the smart contract. That makes Saturna unuggable as there is no mint function to change the supply or alter the current tokenomics.

The DOT token is used for staking and governance; it can be bought or sold on Coinbase and other exchanges. Polkadot, like many post-Bitcoin cryptocurrencies, is both a token that can be bought or sold via exchanges like Coinbase and a decentralized protocol. The Polkadot protocol is designed to allow unrelated blockchains to securely talk to each other, so that value or data can flow between, say, the Ethereum and Bitcoin blockchains without any intermediary.
