Cryptocurrency is formed from two words - crypto (data encryption) and currency (medium of exchange). Thus, a cryptocurrency is a medium of exchange (like ordinary money) that exists in the digital world and uses encryption that ensures the security of transactions. Cryptocurrency is an alternative form of payment in cash and credit cards.

What is cryptocurrency? Cryptocurrency is a decentralized cash system that is stored in a digital wallet. At its core, its much like a bank account a series of transactions within a database but there isnt a central bank or planning body regulating its value, the quantity in the market, or the activities for which it can be used.

Cryptocurrency is a digital mode of payment that is decentralized. Decentralized services, like crypto, dont need a centralized authority which gives them the ability to be censorship-resistant, secure, and hack-proof. There is not one, but many cryptocurrencies in the market.
