Swap Definition & How to Calculate Gains

Binance Liquid Swap is the name of Binances DEX (Decentralized Exchange). Its a regular-looking DeFi token swapping facility with liquidity pool staking. Its supposed to be DeFi, but it runs on top of the Binance infrastructure, so in the end, its a hybrid DeFi/CeFi platform.

The swap and liquify basically sells a portion of SafeMoon supply and buys BUSD/BnB for the Liquidity pools. Why? Well to keep the price stable, you need liquidity ! Now imagine we get some volume moving, the swap and liquify triggers a bit more. I believe its every 500,000,000 coins that it triggers (edited this.)

The country's central bank will provide its currency to another country's central bank in what's called a liquidity swap. The lending central bank uses its liquid state currency to buy the liquid state currency of another borrowing central bank at the market exchange rate. The lender then agrees to sell the borrower's currency back at a rate that also includes any interest accrued up to that point on the loan.
