In the U.S., penny stocks are defined as stock shares that trade for \$5 each or less. 1 They're generally thinly traded. This means they are traded infrequently and it's difficult to accurately price them. This can also make them difficult to sell. Sometimes unexpected companies can fit broadly into the penny-stock category.

However, the cryptocurrency market is extremely volatile and susceptible to large-scale crashes. For this reason, cryptocurrencies must be regulated to protect investors interests. Regulations would also help to ensure that cryptocurrencies are not used for money laundering or other illegal activities.
