A cryptocurrency, crypto-currency, or crypto is a collection of binary data which is designed to work as a medium of exchange. Individual coin ownership records are stored in a digital ledger, which is a computerized database using strong cryptography to secure transaction records, to control the creation of additional coins, and to verify the transfer of coin ownership.

For the first couple of years of its existence, cryptocurrency was Bitcoin. In its first year, Bitcoin was only mined by a small number of enthusiasts and had no transactional value. Nakamoto is estimated to have mined about 1 million Bitcoin during 2009, none of which have ever been used since.
