Quick Take: The Coinbase card is a crypto debit card that allows users to earn up to 4% back in rewards for every purchase made. The card has no annual fee or sign up fee, making it the most attractive option for many crypto traders. Apart from that, cardholders can use the card anywhere Visa debit cards are accepted. How did we calculate this?

Coinbase is good, but it's pretty expensive. They have a lot of services though. One good thing is that some of these exchanges that only list a few coins help us determine the ones that are useful and might hold some fairly stable value. I used to use Coinbase a lot, now Binance.us is my main onramp.

Using Coinbase itself is pretty secure (as long as you use something like Authenticator for 2FA), but you don't control your actual funds and Coinbase can freeze them or take them from you. A wallet like Coinbase wallet is nice, but with it being in a phone always connected to the internet, there are risks of malware causing problems.

Any movement of funds needs to be confirmed via 2 emails and a cellphone code, making it virtually impossible to get hacked. At the same time Coinbase is a US-based company that's insured, making an MTGox situation nearly impossible as well. If you don't mind the government having your information then Coinbase is great.
