A node is simply a computer that connects to a cryptocurrency's blockchain network. It can be used to process transactions, store data about those transactions, and keep track of other nodes on the network. Nodes are essential to supporting the cryptocurrency network, and without them, the system would not be able to function.

In the U.S., penny stocks are defined as stock shares that trade for \$5 each or less. They're generally thinly traded. This means they are traded infrequently and it's difficult to accurately price them. This can also make them difficult to sell. Sometimes unexpected companies can fit broadly into the penny-stock category.
