Here, the code for the automated trading in ThinkOrSwim is quite simple: plot signal = if close >= 195 and close < 200 then 1 else 0; This lets us place the order conditions, and you may link it to something like the ask to avoid overpaying or even the mid-price, and set this as a GTC order. If it gets filled, fantastic.

When you research crypto assets, you may run into a special type of price graph called a candlestick chart. So its good to take a little time to learn how these work. Similar to more familiar line and bar graphs, candlesticks show time across the horizontal axis, and price data on the vertical axis.

To do this, you can use Thinkorswims thinkScript function, a suitable programming language that allows you to port your trading methodology to the platform. Individual craftsmen create their own special scripts that can be written in the terminal to create an individual indicator. Having the right scripts can help you a lot in your trading.

First, note that Thinkorswim does not support fully automated trading, so we have to make do with semi-automated conditional orders. Second, please test all conditional orders in the PaperMoney simulated trading environment before trading with your live account. To set up conditional orders, first ensure that "auto send" is turned off.
