Here, the code for the automated trading in ThinkOrSwim is quite simple: plot signal = if close >= 195 and close < 200 then 1 else 0; This lets us place the order conditions, and you may link it to something like the ask to avoid overpaying or even the mid-price, and set this as a GTC order. If it gets filled, fantastic.

To do this, you can use Thinkorswims thinkScript function, a suitable programming language that allows you to port your trading methodology to the platform. Individual craftsmen create their own special scripts that can be written in the terminal to create an individual indicator. Having the right scripts can help you a lot in your trading.
