Crypto arbitrage is a form of trading that involves simultaneously buying and selling cryptocurrencies from different exchanges. Arbitrage traders make profit from crypto price differences between exchanges. This involves buying assets for the lowest price available and selling for the highest. The process of arbitrage trading usually gives relatively small returns on each trade. Also, traders must place their orders extremely fast in order to have advantage among other players.

A dollar doesn't buy nearly as much as it once did, as the cliché goes. Since the early 20th century, the decline in the value of a dollar has been dramatic due to inflation. A dollar in 1913 had the same buying power as \$26 in 2020. Three separate factors all can create inflation: 1. Increased demand for products and services. This US Inflation Calculator measures the buying power of the dollar over time. To use it, just enter any two dates from 1913 to 2021, an amount, and then click 'Calculate'. (Inflation data for 2022 will be available Feb. 10 when pricing data for January is released.)
