MIR is an Ethereum token that governs the Mirror Protocol which allows the creation of fungible assets, that track the price of real world assets. The project aims to enable 24/7 equities trading by minting synthetic versions of the real thing. MIR tokens can be used to propose and vote on important changes to the protocol.

Mirror Protocol is a decentralized finance (DeFi) platform built on the Terra blockchain. As outlined in Mirror documentation, the ultimate goal of the project is to give users exposure to traditional financial markets while avoiding common issues such as high brokerage fees and global accessibility. The project facilitates this by creating fungible tokens, known as mAssets, that track the price of real-world assets.
